

Product Change Notification

- Change to M8 female connector on the e-Series

Date: To be implemented in production at the end of Q1 2023

Product(s) Affected: All e-Series

Summary: Changing the M8 connector on all e-series robots from a male version to a female version. The tool cap was also facelifted to fit with the female version.

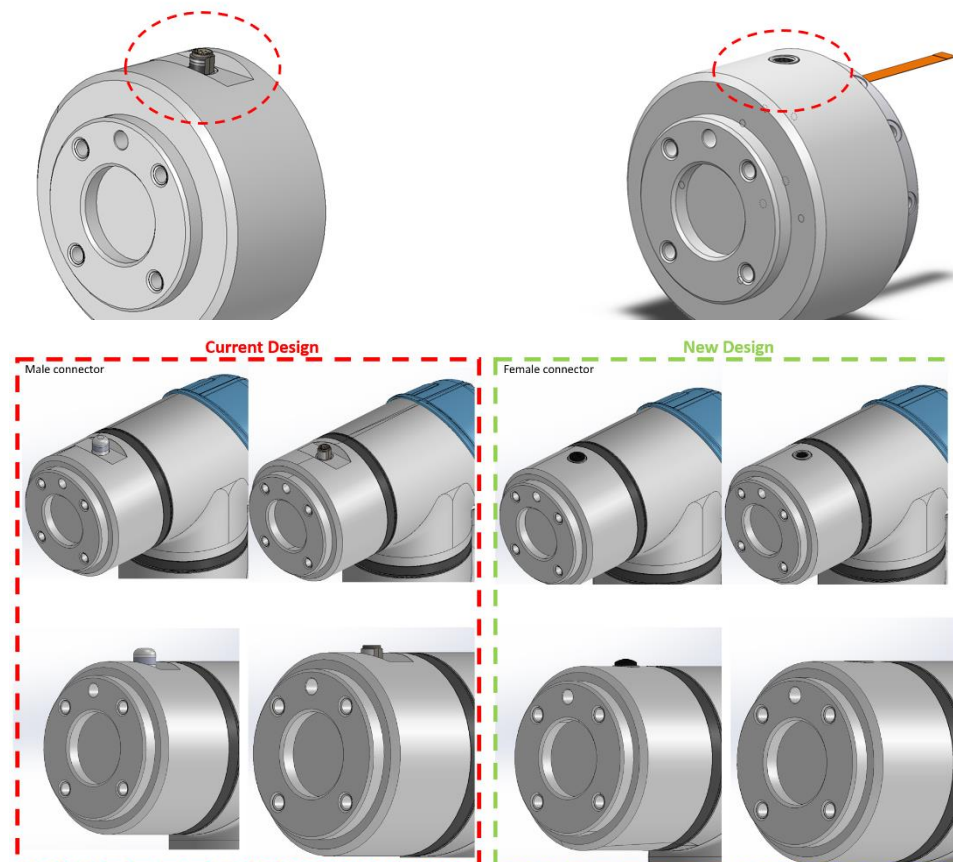

Overview

We have improved the M8 connector at the flange to move towards a more robust connector solution.

When: Planned implementation in production is the end of Q1 2024. Detailed information about the implantation date will be announced during Q1 2024.

Detailed info: The current M8 connector will be changed from a male version to a female version. The connector will be inside the tool cap as illustrated in the pictures below. We will provide an adaptor (15 cm adaptor cable, Male – Male M8) to soften the transition and enable tools with the current connector type.
